

Project Idea: CivicAI – Your AI Public Service Officer

Problem Statement

Every year, millions of people struggle to understand government documents, legal notices, welfare schemes, insurance policies, tax documents, and application forms because they are lengthy, technical, and filled with legal jargon. As a result, many citizens miss important deadlines, lose benefits they are eligible for, or make mistakes while submitting applications.

Access to information exists, but understanding it remains a major challenge.

Our Solution

We will build **CivicAI**, an AI-powered public service assistant that helps ordinary citizens understand and act on official documents.

Instead of simply answering questions like a chatbot, CivicAI acts like a knowledgeable government officer who explains documents, guides users through processes, and recommends the next steps.

Users can upload documents such as:

- Government scheme notifications
- Legal notices
- Income certificates
- Ration cards
- Aadhaar-related documents
- Land records
- Pension documents
- Insurance policies
- Tax notices
- Any official PDF or scanned document

Gemma analyzes the uploaded documents and provides clear, easy-to-understand guidance.

What CivicAI Can Do

Explain Documents

Convert complicated legal or government language into simple English or regional languages.

Example:

"This notice means you need to submit your income certificate before 15 August."

Eligibility Checker

Based on the user's uploaded documents and profile, determine whether they qualify for various government schemes or benefits.

Example:

"You appear eligible for PMAY and Ayushman Bharat, but you'll need an updated income certificate."

Personalized Action Plan

Instead of only summarizing, CivicAI generates a step-by-step checklist.

Example:

- Upload income certificate
 - Visit nearest CSC
 - Submit Form 16
 - Deadline: 15 August
-

Missing Document Detection

Automatically identify missing certificates or required documents before an application is submitted.

Conversational Follow-up

Users can continue asking questions naturally.

Example:

- "Why am I not eligible?"
- "What if my income changes?"
- "Can I apply next year?"

Gemma remembers the context and responds intelligently.

Multilingual Support

Explain everything in simple English, Hindi, Bengali, Odia, or other supported languages so people can understand official information regardless of language barriers.

Why This Matters

Many people don't lose opportunities because information is unavailable—they lose them because the information is difficult to understand.

Our goal is to bridge the gap between citizens and government services using AI.

This can especially help:

- Rural populations
 - Senior citizens
 - First-time applicants
 - Students
 - Small business owners
 - People unfamiliar with legal or government terminology
-

Why Gemma 4 Is the Core of the Project

Gemma is not just generating text—it powers the entire decision-making process.

We leverage Gemma for:

- Understanding long and complex documents
- Reading scanned documents (multimodal capabilities)
- Reasoning across multiple uploaded documents
- Maintaining conversational context
- Explaining information in simple language
- Generating structured checklists and action plans
- Calling external tools/APIs when needed (for example, locating the correct application form or government website)

Without Gemma, the application would simply be a document viewer. With Gemma, it becomes an intelligent public service assistant.

Potential Future Scope

- Integration with government portals
- Automatic form filling
- Voice-based interaction for non-literate users
- Offline deployment for rural service centers

- AI-powered grievance assistance
- Mobile application for citizens

One-Line Pitch

CivicAI is an AI-powered public service officer that helps citizens understand official documents, check eligibility for government schemes, and receive personalized guidance using the reasoning capabilities of Gemma 4.
